EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE CLAIMS:

Claims 3-19 have been canceled.

Claim 1 has been replaced with the following version of claim 1:

--Claim 1 (currently amended) An integral source material having at least one nuclide that is activated by exposure to radiation, the nuclide is a chemically bound constituent of the backbone of a polymer of the integral source material, wherein the integral source material is configured before activation to provide a device wherein the device is selected from the group consisting of test-objects, rectangular and disc shaped sources configured to radiate an area, radioactive enclosures, flood sources, nuclear imaging devices, shrouds and excitation sources for energy-dispersive fluorescence analysis, wherein the device comprises a checkerboard comprising alternating active and inactive squares, the active squares containing the integral source material.—

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the primary reason for allowance is the inclusion that the device comprises a checkerboard comprising alternating active and inactive squares, the active squares containing the integral source material in an integral source material having at least one nuclide that is activated by exposure to radiation wherein the nuclide is a chemically bound constituent of the backbone of a polymer of the integral source material. The closest prior art fails to teach or suggest this checkerboard design since Park actually states that the radionuclides are distributed evenly within the polyurethane carrier, which teaches away from the claimed checkerboard design.
